

Practice with choice

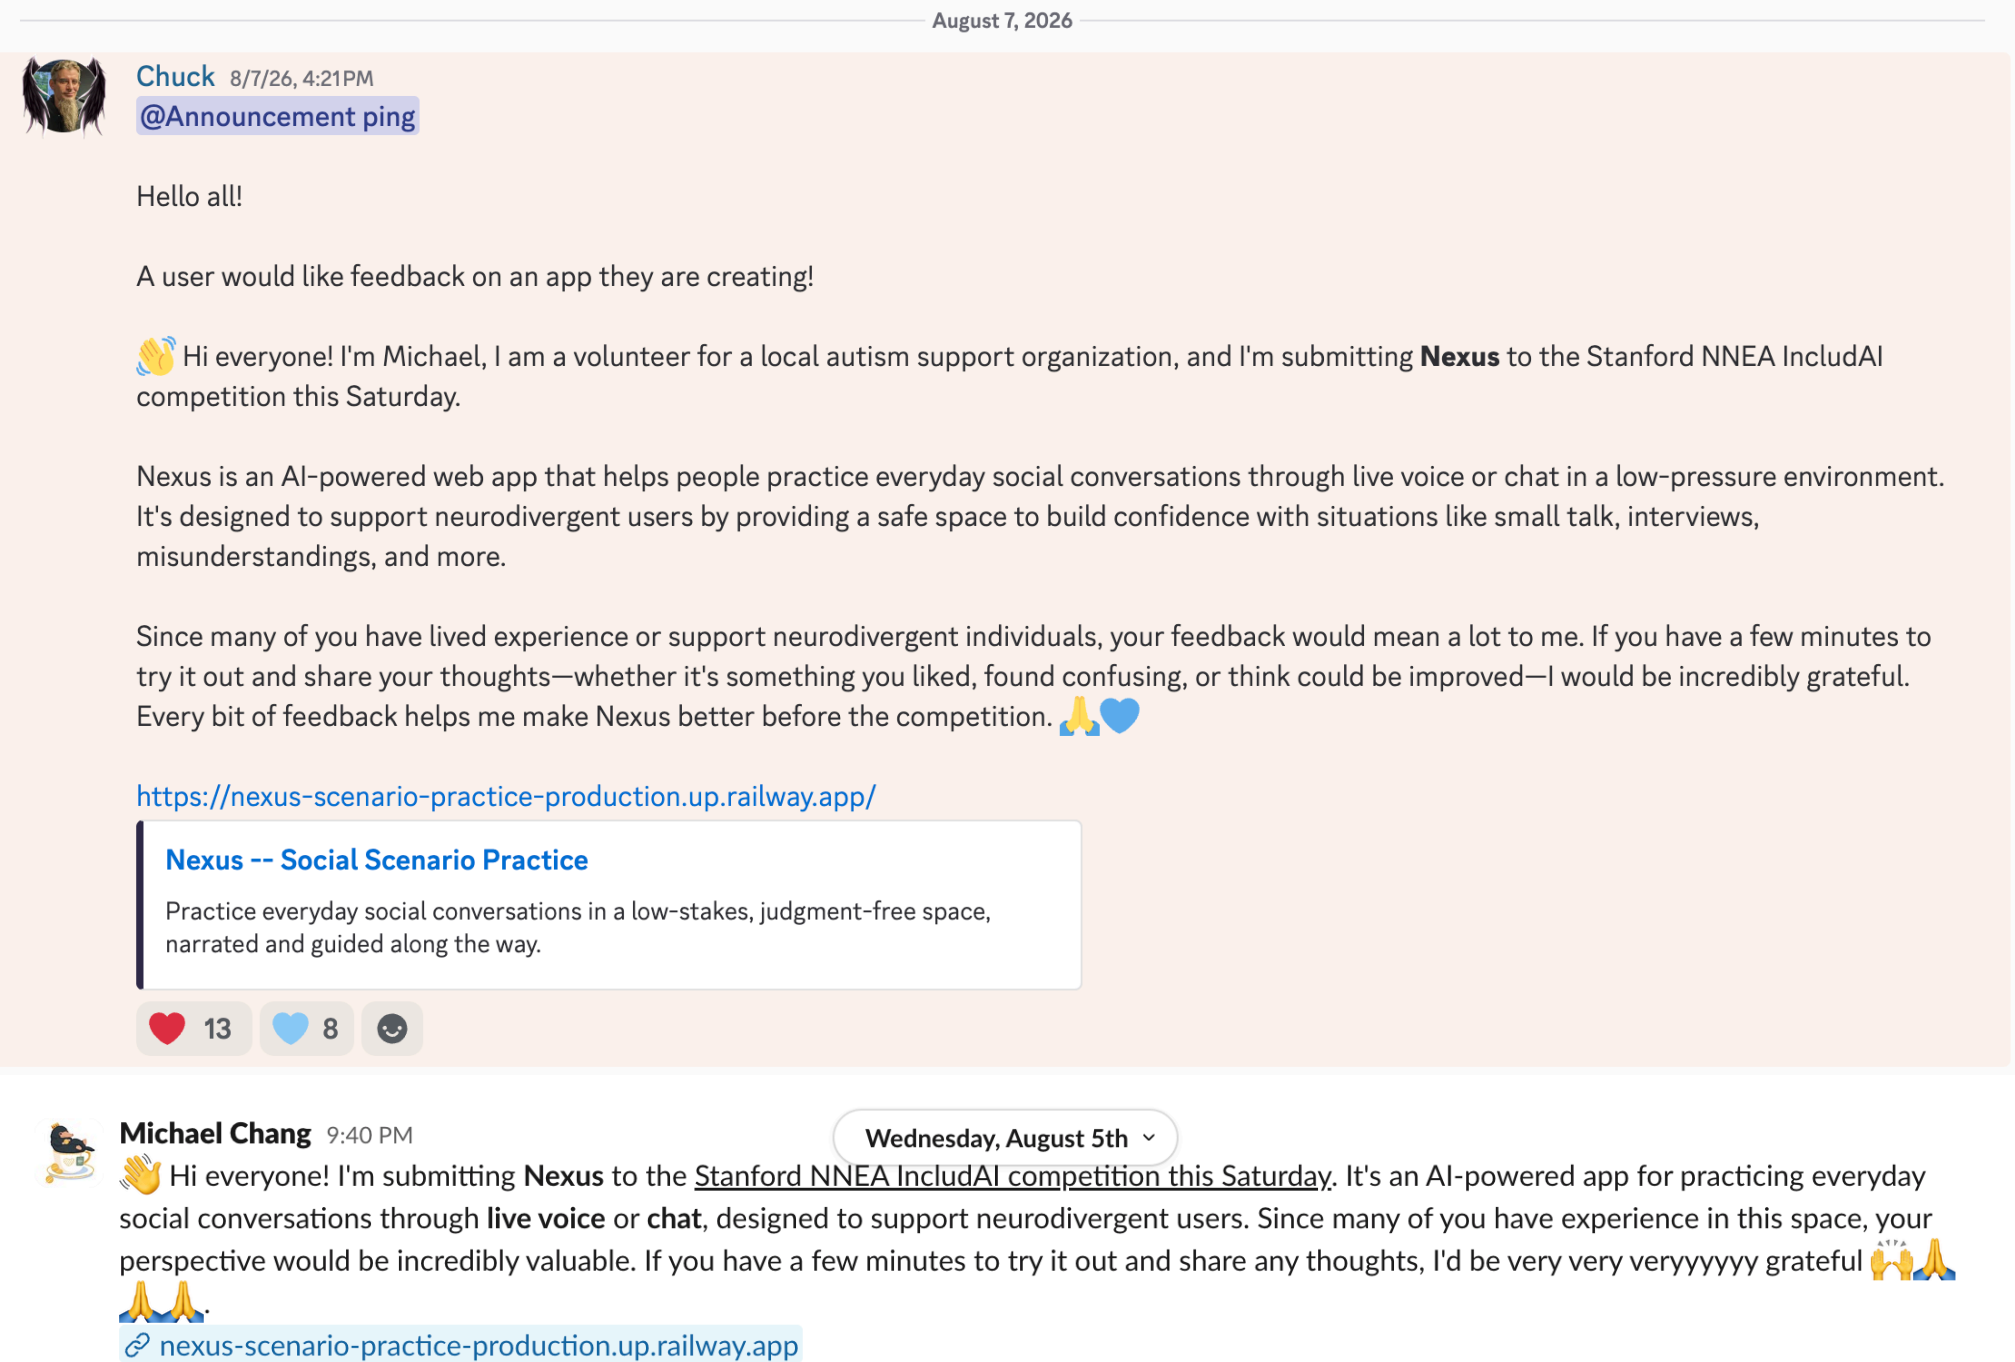

The problem

Everyday conversations can involve unclear expectations, unexpected small talk, or sensory overload. At Stanford SNP REACH, I pitched an app to help autistic teens meet. Teammates pointed out that meeting in person can itself cause anxiety. NEXUS grew from that feedback: a low-pressure place to practice conversations first.

Designed with feedback

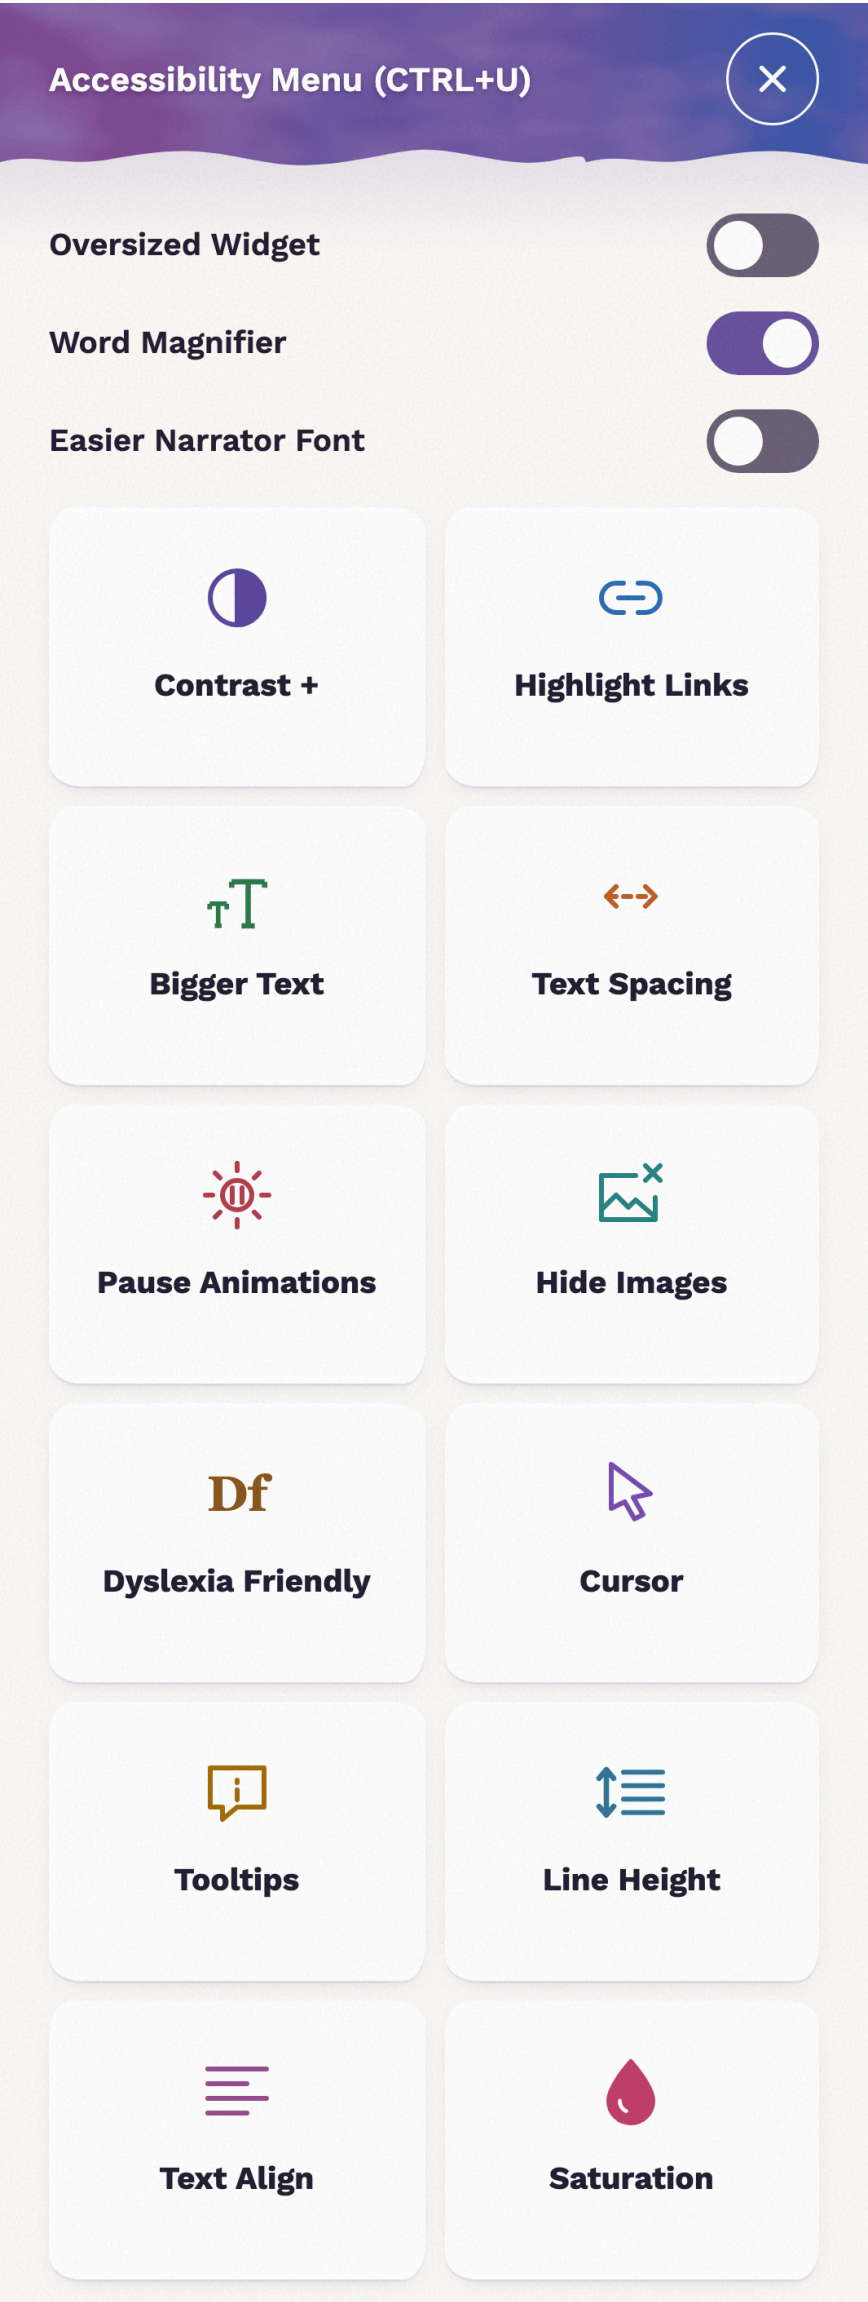

I shared NEXUS with a neurodivergent Discord community (1,400+ members), the Stanford SNP REACH Slack (about 300 members), and friends. Their feedback changed the design:

- Fear of being judged: reflection has no grade
- Comfort: adjustable display, typing or talking
- Trust: the purpose is explained up front
- Voice design: clearer character rules

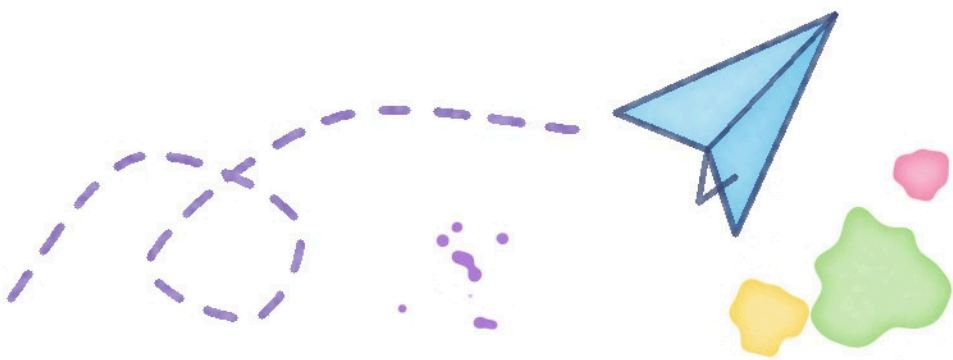

Top: the server owner posted my request in a neurodivergent Discord (1,400+ members). Bottom: my post in the Stanford SNP REACH Slack (about 300 members).

Make it yours

Twelve display tools.
Also built in:

- ✓ Exit any scenario anytime
- ✓ No timer in text chat
- ✓ Type or talk out loud
- ✓ Read-aloud controls
- ✓ Follows device dark mode and reduced motion
- ✓ No account; reflections stay on your device
- ✓ Text and live audio go to OpenAI for responses

Real Accessibility Menu from the live app.
