

Practice conversations. Express your needs. Be yourself.

Michael Chang | BASIS Independent Silicon Valley

AI roleplay for neurodivergent users to practice everyday conversations

Support, when you want it

Your Reflection

STRENGTHS YOU SHOWED

- Clarifying needs by asking which numbers belonged in the summary and when the report was due
- Listening closely and reflecting back the full request: metrics, campaign breakdown, one-page format, takeaway, and deadline
- Creating shared clarity by confirming, "I'll send it to you then"

WHAT PRIYA LEARNED ABOUT YOU

I now know that you want to understand the exact requirements before starting, rather than guessing. I also know that once the details are clear, you can summarize the plan and commit to a specific delivery time.

Optional hints

Explore possible replies, then use your own words.

Explain that

One possible meaning of an unclear message.

Reflection excerpt

Strengths and ideas to try, with no grade.

REAL APP CAPTURES • Conversations are samples written for this poster, not participant data • AI replies vary

Four everyday scenarios

The Missing Details
A vague task at work. Practice asking clarifying questions.

The Unexpected Conversation
Small talk at checkout. Practice short, easy replies.

Too Much Happening at Once
A loud hair salon. Practice naming a sensory need early.

Asking for a Change
Bright lights in class. Practice asking for an adjustment.

Scenario sources, paraphrased. The Missing Details: an autistic intern followed written steps exactly but missed expectations no one stated (Specialisterne). The Unexpected Conversation and Too Much Happening at Once: autistic adults describe small talk with cashiers and hairdressers as draining (Autism UK forum). Asking for a Change: an autistic adult realized after 40 years that it was OK to ask for changes at work (The Guardian).

How it works

Scan to try NEXUS. Choose a scenario, then practice with an AI character by typing or talking. Internet required; live voice needs a microphone. Early prototype for practice, not clinical treatment.
